Assignment 0124 Feedback

Because this assignment serves as a building block to the effective use of a command-based system shell, outcome *1a* tops out at **|**. Later, more advanced assignments will allow this outcome to expand to the maximum **+**.

Andrew Kowalczyk

1a — Your symbol and command definitions all check out nicely (well exceeding the requested level of detail and in very readable, clean Markdown to boot!), getting you a good start in building your "vocabulary" for interacting with a command-based operating system shell. However, I never did hear from you about your DIY repository, so that leaves a hole for this outcome and takes you down a notch. (**/**)

4d — You clearly found some good information sources and used them well. (**+**)

4e — You phased your work extremely well, perhaps even more finely grained than necessary for this scale of assignment. Your commit messages are nicely descriptive. (**+**)

4f — Something submitted on time, but missing the DIY repository (although it is possible that you just forgot to tell me about it—still, this was part of what you needed to do, so in the end there's no getting around the ding for this one). (**|**)
